

UniverseBridge

Tableau

UniverseBridge connects
your Tableau apps to your SAP
BusinessObjects semantic layer.

What Is UniverseBridge?

Why do organizations invest in multiple business intelligence platforms? They like the interactive visualizations offered by a tool like Tableau, but they also like the powerful backend and metadata layer of a tool like SAP BusinessObjects.

UniverseBridge gives you the best of both worlds.

With UniverseBridge, you can seamlessly integrate your data residing in SAP BusinessObjects into Tableau, allowing you to leverage your corporate business logic already developed within your SAP BusinessObjects Universes.

Why Use UniverseBridge?

Accelerate Development

- ✓ Leverage the power of your existing BusinessObjects Universes without having to re-build SQL Queries

Reuse Not Rebuild

- ✓ Use what you've already built in BusinessObjects to create interactive visualizations and apps in Tableau
- ✓ Leverage all of your corporate business logic already developed within your BusinessObjects Universes and custom report calculations
- ✓ Easily associate data across existing legacy Universes and other data sources without rebuilding them
- ✓ Automatically see any changes to object and join definitions within the BusinessObjects Universes instantly reflected within your scripts

Get the Best of Both Worlds

- ✓ Development in Tableau is fast
- ✓ BusinessObjects provides a robust "middle tier"
- ✓ Federate data across legacy BusinessObjects Universes without the complexity of migrating them to Multi Source Universes
- ✓ Tableau provides a beautiful and intuitive data discovery platform
- ✓ BusinessObjects universes are purposely built to host and maintain your business logic
